EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for the following claim amendments in this examiner's amendment was given in a telephone interview with Steve Yates on December 7, 2006.

The application has been amended as follows:

IN THE CLAIMS:

1. With regard to claims 1 and 12, replace "and a second resource of a second type" with "and a second resource of a second type different from the first type" in the first limitation of each claim.
 2. Claims 22 and 27 are replaced with the respective claims below.
22. (Currently Amended) A method, comprising:
- determining a first server is geographically closer to a client than a second server;
 - determining a first and a second efficiency rating of communication respectively between the client and the first and the second server, said ratings including efficiency for accessing a first resource type of the servers;

determining a third and fourth efficiency rating of communication respectively between the client and the first and the second servers, said ratings including efficiency for accessing a second resource type different from the first resource type;

determining a first and a second predicted reliability rating respectively for the first and second servers;

evaluating whether the first efficiency rating exceeds the second efficiency rating but the first predicted reliability is less than the second predicted reliability, and if so, providing a web page of the first server linking to content of the second server.

27. (Currently Amended) An article, comprising a storage medium having instructions encoded thereon, said instructions, which when executed by a processor, are capable of directing the processor to:

determine a first server is geographically closer to a client than a second server;

determine a first and a second efficiency rating of communication respectively between the client and the first and the second servers, said ratings including efficiency for accessing a first resource type of the servers;

determine a third and fourth efficiency rating of communication respectively between the client and the first and the

second servers, said ratings including efficiency for accessing a second resource type different from the first resource type;

determine a first and a second predicted reliability rating respectively for the first and second servers;

evaluate whether the first efficiency rating exceeds the second efficiency rating but the first predicted reliability is less than the second predicted reliability, and if so, providing a web page of the first server linking to content of the second server.

Allowable Subject Matter

Claims 1-31, as submitted by Applicant on September 21, 2006 and in view of the above amendments, are allowed.

The following is an Examiner's statement of reasons for allowance:

Claims 22 and 27 were amended to further clarify that content is routed to clients based on efficiency ratings for a particular content type and not the efficiency of the server in general.

Some references in the prior art of record determined efficiency by monitoring the transfer of a generic content file from each server to a client or by monitoring various file transfers between each server and client to calculate an overall efficiency rating for each server. However these prior art references were not concerned with routing content to clients based on server efficiency ratings that are measured and based on a specific resource or content type in the fashion that Applicant has claimed.
